STACK

Core stack

NestJS | Go | Angular | Docker | GitHub | PostgreSQL

Other technologies I work with:

Claude AI | Hostinger | MySQL | CSS3 | Postman | VirtualBox

PROJECTS

Invoicing System (Multi-tenant)

- Developed a multi-tenant invoicing and inventory platform with role-based access, enabling multiple businesses to manage their data in isolated environments.
- Implemented real-time stock updates and movement tracking, ensuring data consistency across sales and inventory modules.
- Built RESTful APIs with JWT authentication and structured validation, improving security and reliability of operations.

Creativistas Web

- Developed a web platform for psychological assessments with dynamic test rendering and automated result processing.
- Implemented email delivery system for test results using backend services, ensuring reliable and asynchronous communication.
- Designed user flows focused on usability and accessibility, improving completion rates for end users.

Online Store (TiendaNube)

- Customized e-commerce themes to match client branding, improving visual consistency and user experience.
- Configured complex product variants (attributes, optional selections, conditional options) to support diverse product catalogs.
- Optimized checkout flow to reduce friction and improve conversion rates for client-managed stores.
